

RAMIJ AMED SARDAR

Bengaluru, India | +916289730218 | ramijnalpur@gmail.com | linkedin.com/in/ramij-amed-sardar-0112071b9/ | github.com/rmjamd

PROFESSIONAL SUMMARY

Senior Backend Engineer with 5+ years of experience building high-throughput distributed systems and scalable B2B SaaS platforms handling 10K+ TPS. Skilled in Java, Spring Boot, Kafka, Redis, Kubernetes, and AWS, with strong expertise in microservices, event-driven architecture, low-latency systems, cloud-native infrastructure, and high-availability backend platforms. Experienced in scalability, JVM performance tuning, asynchronous processing, and reliability engineering.

TECHNICAL SKILLS

Programming Languages: Java (primary), SQL, Python, C++.

Databases & Caching: MySQL, PostgreSQL, NoSQL (Cassandra, Redis, MongoDB), Elasticsearch, Database Optimization.

Backend & Messaging: Spring Boot, Spring Cloud, JPA, Hibernate, REST APIs, Kafka, RabbitMQ.

Cloud and DevOps: Kubernetes, Docker, Helm, AWS (EC2, RDS, EKS, ElastiCache), Jenkins, CI/CD, Git, GitLab, Azure, Autoscaling.

Design and Architecture: Microservices, Event-Driven Architecture, Async Processing, Idempotency, CQRS, API Gateway, Fault Tolerance, Scalability, Circuit Breaker, OAuth, JWT.

PROFESSIONAL EXPERIENCE

Gupshup Technology Pvt. Ltd.,

Bengaluru, India

Senior Software Engineer 1: | June 2025 – Present.

- **Designed and owned** a high-throughput, high-availability RCS onboarding and messaging platform, leveraging Kafka for event streaming and **RabbitMQ for consumer processing** and end-message delivery. Implemented fault-tolerant asynchronous workflows, Splunk-based observability, and Kubernetes deployment, handling **10k TPS** in production.
- **Migrated** the RCS platform's config service from ZooKeeper to MySQL — eliminated a SPOF behind 3–4 major prod incidents (30 min downtime each), retired 4 ZooKeeper nodes (**\$3–4K/yr saved**), and rebuilt dynamic config propagation on RabbitMQ with per-key refresh and multi-tier fallback.
- **Led** a large-scale, zero-downtime migration of **1,000+** enterprise clients across India and abroad from a legacy platform to a modern, scalable architecture, ensuring backward compatibility, template validation, and zero-downtime production rollout.

Software Development Engineer 2: | June 2023 – June 2025

Bengaluru, India

- **Redesigned** a legacy, MySQL-based AWS RDS billing workflow into a low-latency, event-driven billing pipeline using Redis and Spring Boot, reducing billing latency to **20 ms** and eliminating AWS RDS infrastructure costs.
- **Led** the design and implementation of a real-time chat system, collaborating **with 7 teams**, using **WebSocket** and **RabbitMQ pub-sub architecture**, achieving a **67%** efficiency improvement with a custom load balancer using consistent hashing.
- **Reduced** AWS infrastructure costs by **\$4.8K per month** through resource optimization, including instance right-sizing, termination of idle workloads, and standardized golden images.
- **Mentored 8 junior** engineers; improved code reliability through code reviews, design walkthroughs, and testing practices, reducing production defects by **75%**.

Software Development Engineer 1: | June 2021 – June 2023

Bengaluru, India

- **Resolved** a critical **RabbitMQ consumer** reconnection issue through root cause analysis; implemented resilient consumer recovery, idempotent message processing, retry mechanisms, and DLQ handling, eliminating a **30-minute** processing backlog and improving messaging reliability.
- **Launched self-serve platforms** for IG and GBM by collaborating with cross-functional stakeholders to gather requirements and communicate solutions using JAX-RS, RabbitMQ, and MySQL, reducing client onboarding time by **70%**.

PROJECTS

- **Event Bus Library**—Developed a **RabbitMQ-based** distributed event bus in Java for cache invalidation and cross-service event propagation. Designed topic exchanges, routing-key and queue-binding strategies, and developed publisher confirms, consumer acknowledgments, and idempotent processing. Adopted by 7+ teams, processing 1000+ events/sec while improving cache consistency and messaging reliability across microservices.
- **JobEmailer** — **Generative AI Automation (Java, Spring Boot, Gemini API)**: Built an LLM agent turning LinkedIn job posts into personalized recruiter emails and DMs, using schema-constrained prompts with profile grounding. Added cascading key/model failover with a rule-based fallback for zero-downtime generation — cutting per-application effort **~70%**.

EDUCATION

B.E. in Computer Science and Engineering, **Jadavpur University**, Kolkata—**CGPA: 8.62/10** | August 2017–August 2021

ACHIEVEMENTS AND CERTIFICATES

- Solved **1350+** coding problems (**LeetCode 700+**, **GeeksforGeeks 420+**, **HackerRank 100+**).
- Rated **6 stars** on **HackerRank** (Algorithms and DSA) and **4th place** in the CodeChef **February Long Challenge 2021**
- **Certifications:** **HackerRank** (Intermediate), **GeeksforGeeks** (Placement 100).
